

Machine Learning with WEKA

Bernhard Pfahringer

(based on material by Eibe Frank, Mark Hall, and Peter Reutemann)

Department of Computer Science,
University of Waikato, New Zealand

- WEKA: A Machine Learning Toolkit
- The Explorer
 - Classification and Regression
 - Clustering
 - Association Rules
 - Attribute Selection
 - Data Visualization
- The Experimenter
- The Knowledge Flow GUI
- Other Utilities
- Conclusions

WEKA: the bird

The *Weka* or *woodhen* (*Gallirallus australis*) is an endemic bird of New Zealand. (Source: *Wikipedia*)

Copyright: Martin Kramer (mkramer@wxs.nl)

WEKA: the software

- Machine learning/data mining software written in Java (distributed under the GNU Public License)
- Used for research, education, and applications
- Complements “Data Mining” by Witten & Frank
- Main features:
 - ◆ Comprehensive set of data pre-processing tools, learning algorithms and evaluation methods
 - ◆ Graphical user interfaces (incl. data visualization)
 - ◆ Environment for comparing learning algorithms

History

- Project funded by the NZ government since 1993

FRST App Number: 93-WKT-23-719

7. **PROGRAMME GOAL** (State the overall goal of the programme in a maximum of 5 lines).

The programme aims to build a state-of-the-art facility for developing techniques of machine learning and investigating their application in key areas of the New Zealand economy. Specifically we will create a workbench for machine learning, determine the factors that contribute towards its successful application in the agricultural industries, and develop new methods of machine learning and ways of assessing their effectiveness.

- ◆ Develop state-of-the art workbench of data mining tools
- ◆ Explore fielded applications
- ◆ Develop new fundamental methods

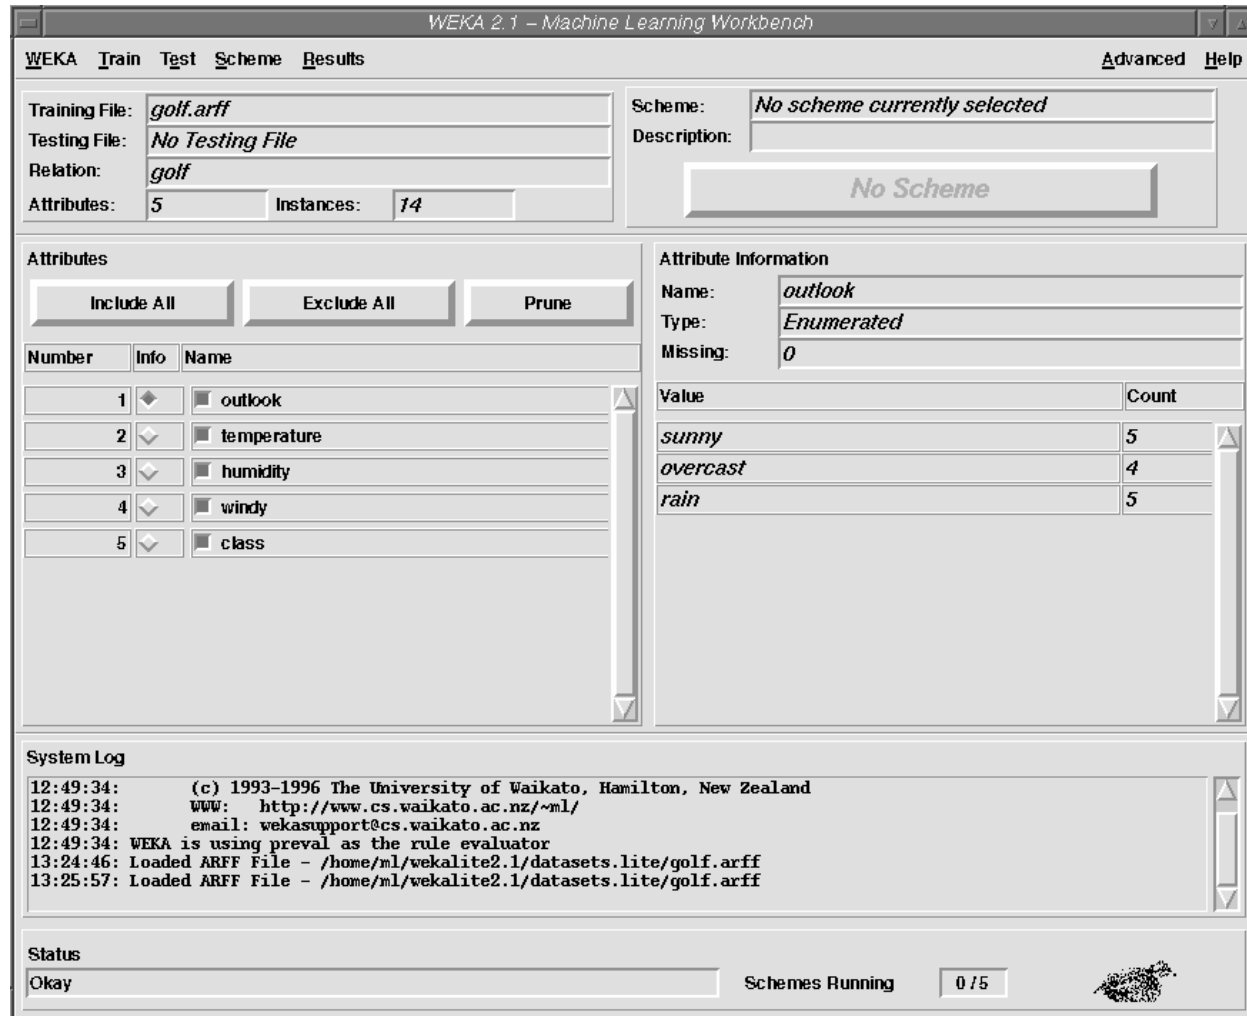

History (2)

- Late 1992 - funding was applied for by Ian Witten
- 1993 - development of the interface and infrastructure
 - ◆ WEKA acronym coined by Geoff Holmes
 - ◆ WEKA's file format "ARFF" was created by Andrew Donkin
ARFF was rumored to stand for **A**ndrew's **R**idiculous **F**ile **F**ormat
- Sometime in 1994 - first internal release of WEKA
 - ◆ TCL/TK user interface + learning algorithms written mostly in C
 - ◆ Very much beta software
 - ◆ Changes for the b1 release included (among others):
 - "Ambiguous and Unsupported menu commands removed."
 - "Crashing processes handled (in most cases :-)"
- October 1996 - first public release: WEKA 2.1

History (3)

- July 1997 - WEKA 2.2
 - ◆ Schemes: 1R, T2, K*, M5, M5Class, IB1-4, FOIL, PEBLS, support for C5
 - ◆ Included a facility (based on Unix makefiles) for configuring and running large scale experiments
- Early 1997 - decision was made to rewrite WEKA in Java
 - ◆ Originated from code written by Eibe Frank for his PhD
 - ◆ Originally codenamed **JAWS** (**JA**va **W**eka **S**ystem)
- May 1998 - WEKA 2.3
 - ◆ Last release of the TCL/TK-based system
- Mid 1999 - WEKA 3 (100% Java) released
 - ◆ Version to complement the Data Mining book
 - ◆ Development version (including GUI)

The GUI back then...

TCL/TK interface of Weka 2.1

WEKA: versions

- There are several versions of WEKA:
 - ◆ WEKA 3.4: “book version” compatible with description in data mining book
 - ◆ WEKA 3.5.5: “development version” with lots of improvements
- This talk is based on a nightly snapshot of WEKA 3.5.5 (12-Feb-2007)

WEKA only deals with “flat” files

@relation heart-disease-simplified

@attribute age numeric

@attribute sex { female, male}

java weka.gui.GUIChooser

java -jar weka.jar

Explorer: pre-processing the data

- Data can be imported from a file in various formats: ARFF, CSV, C4.5, binary
- Data can also be read from a URL or from an SQL database (using JDBC)
- Pre-processing tools in WEKA are called “filters”
- WEKA contains filters for:
 - ◆ Discretization, normalization, resampling, attribute selection, transforming and combining attributes, ...

Explorer: building “classifiers”

- Classifiers in WEKA are models for predicting nominal or numeric quantities
- Implemented learning schemes include:
 - ◆ Decision trees and lists, instance-based classifiers, support vector machines, multi-layer perceptrons, logistic regression, Bayes’ nets, ...
- “Meta”-classifiers include:
 - ◆ Bagging, boosting, stacking, error-correcting output codes, locally weighted learning, ...

Explorer: clustering data

- WEKA contains “clusterers” for finding groups of similar instances in a dataset
- Some implemented schemes are:
 - ◆ *k*-Means, EM, Cobweb, X-means, FarthestFirst
- Clusters can be visualized and compared to “true” clusters (if given)
- Evaluation based on loglikelihood if clustering scheme produces a probability distribution

Explorer: attribute selection

- Panel that can be used to investigate which (subsets of) attributes are the most predictive ones
- Attribute selection methods contain two parts:
 - ◆ A search method: best-first, forward selection, random, exhaustive, genetic algorithm, ranking
 - ◆ An evaluation method: correlation-based, wrapper, information gain, chi-squared, ...
- Very flexible: WEKA allows (almost) arbitrary combinations of these two

Explorer: data visualization

- Visualization very useful in practice: e.g. helps to determine difficulty of the learning problem
- WEKA can visualize single attributes (1-d) and pairs of attributes (2-d)
 - ◆ To do: rotating 3-d visualizations (Xgobi-style)
- Color-coded class values
- “Jitter” option to deal with nominal attributes (and to detect “hidden” data points)
- “Zoom-in” function

Performing experiments

- Experimenter makes it easy to compare the performance of different learning schemes
- For classification and regression problems
- Results can be written into file or database
- Evaluation options: cross-validation, learning curve, hold-out
- Can also iterate over different parameter settings
- Significance-testing built in!

The Knowledge Flow GUI

- Java-Beans-based interface for setting up and running machine learning experiments
- Data sources, classifiers, etc. are beans and can be connected graphically
- Data “flows” through components: e.g., “data source” -> “filter” -> “classifier” -> “evaluator”
- Layouts can be saved and loaded again later
- cf. Clementine TM

Sourceforge.net – Web Traffic

Projects based on WEKA

- 45 projects currently (30/01/07) listed on the [WekaWiki](#)
- Incorporate/wrap WEKA
 - ◆ GRB Tool Shed - a tool to aid gamma ray burst research
 - ◆ YALE - facility for large scale ML experiments
 - ◆ GATE - NLP workbench with a WEKA interface
 - ◆ Judge - document clustering and classification
 - ◆ RWeka - an R interface to Weka
- Extend/modify WEKA
 - ◆ BioWeka - extension library for knowledge discovery in biology
 - ◆ WekaMetal - meta learning extension to WEKA
 - ◆ Weka-Parallel - parallel processing for WEKA
 - ◆ Grid Weka - grid computing using WEKA
 - ◆ Weka-CG - computational genetics tool library

WEKA and PENTAHO

- Pentaho – The leader in Open Source Business Intelligence (BI)
- September 2006 – Pentaho acquires the Weka project (exclusive license and SF.net page)
- Weka will be used/integrated as data mining component in their BI suite
- Weka will be still available as GPL open source software
- Most likely to evolve 2 editions:
 - ◆ Community edition
 - ◆ BI oriented edition

Limitations of WEKA

- Traditional algorithms need to have all data in main memory
 - ==> big datasets are an issue
 - Solution:
 - ◆ Incremental schemes
 - ◆ Stream algorithms
- MOA “**M**assive **O**nline **A**nalysis”
(not only a *flightless* bird, but also *extinct!*)

Conclusion: try it yourself!

- WEKA is available at
<http://www.cs.waikato.ac.nz/ml/weka>
- Also has a list of projects based on WEKA
- (probably incomplete list of) WEKA contributors:

Abdelaziz Mahoui, Alexander K. Seewald, Ashraf M. Kibriya, Bernhard Pfahringer, Brent Martin, Peter Flach, Eibe Frank, Gabi Schmidberger, Ian H. Witten, J. Lindgren, Janice Boughton, Jason Wells, Len Trigg, Lucio de Souza Coelho, Malcolm Ware, Mark Hall, Remco Bouckaert, Richard Kirkby, Shane Butler, Shane Legg, Stuart Inglis, Sylvain Roy, Tony Voyle, Xin Xu, Yong Wang, Zhihai Wang
