

Proposal of TF on

Intelligent Data Mining and Analysis

Proposed by S. Santoso

Scope

Intelligent data mining and Analysis is a advanced technology in information processing to extract rules and knowledge from large database systematically and analyze the nonlinear relationship between input and output variables in complex problems or phenomena. Data mining is a mature application in other areas like marketing. It is however relatively recent that the power industry has shown an interest in these techniques.

Activities fo the TF include

- Organization of panel session
- Paper sessions
- Tutorials
- Review of industry practices
- Review of state of the art
