

# 2008 IEEE Region 5 Student Robotics Contest

These rules have been issued as early as possible and incorporate response to questions on the draft rules received from teams in August and September.

~~There will be a forum established during October to assist teams in communicating with each other, and with the Kansas City Section as needed.~~

**NOTE: A forum has NOT been established. Please look at the conference web page weekly to keep up with any FAQs.**

The competition should be exciting. The Kansas City Section and the host school, the University of Missouri – Kansas City are looking forward to your participation.

There will be plenty of room at the competition site and great accommodations. We will provide a temporary practice space on Friday afternoon/evening, and use of the competition space from midnight until the competition starts. Two complete “practice tracks” will be available during those times, and teams are welcome to bring their own practice tracks.

These rules are considered “final”. In case of the needs for interpretations, the ~~forum-FAQs~~ will be the main vehicle for such communication. If enough interpretations and/or clarifications occur, it may be necessary to issue a revised set of rules. That, however, should not be expected.

On this website you will find the following files:

- The Rules, Version 1
- This Introduction
- Files of:
  - The lines on the track, suitable for plotting
  - Lines on the track, in .pdf format, for information.
- Photos of the competition track
- (coming) Information about the Forum

As your hosts, we want you to have an enjoyable and interesting experience in building your robots and competing with your peers in Kansas City next April.

Bob Ronan, for the Kansas City Section

~~September 28, 2007~~

Revised: February 16, 2008
