IEEE PES Trondheim PowerTech 2011

The Final Program is now available on our web site!

The final program is now available on our web site <http://ewh.ieee.org/conf/powertech/2011/> under “Program”. Many have asked us to take special considerations for the presentation of their paper – we have tried to take your wishes into account. But you will understand that we end up with an “infeasible problem”, and unfortunately we could not satisfy all wishes. Please accept our apologies for that we will not be able to move papers or sessions at this stage.

Information for presenters is available on the web site now.

Poster sessions

The poster sessions on Tuesday and Wednesday morning will last from 0900 to 1100. Posters can be left in place until lunch at 1230 for those presenters who want some additional time, but there is no requirement that you should stay after 1100. Information regarding poster size etc. is now also available on the web site under “Information for presenters”.

Technical tours

Now that the final program is available you should check if you have time to join one of the Technical tours to the Leirfossen Hydro Power Plants (on Tuesday morning) or Smøla Wind Park (on Wednesday).

Registration information for the technical tours: choose “Edit your registration” under registration. If you have not registered for the conference yet, you can register for the technical tours simultaneously.

Accompanying Persons Tour to Fosen

So far not enough people have registered for this tour. Accompanying persons should take a look if they want to join this interesting tour to the coastal areas across the Trondheim Fjord. Due to the deadline for reserving the bus we need to cancel the tour if there are not enough participants, so don’t wait with registering if you are interested! Should the tour be cancelled all who have registered will get full refunding.

Opening Session

There is a change in the plenary session on Monday: Statnett Vice President Vibeke Hodne will come instead of Øivind Rue, but she will talk about the same theme, “Experience with the operation of HVDC interconnections”. Given Statnett’s long experience with HVDC, this presentation will comprise lots of interesting information.

We look forward to meeting you all in Trondheim!
