The screenshot shows the IEEE Xplore Digital Library interface. At the top, there are navigation links for IEEE.org, IEEE Xplore Digital Library, IEEE-SA, IEEE Spectrum, and More Sites. The main header includes the IEEE Xplore logo and an Institutional Sign In button. Below the header is a navigation bar with options like BROWSE, MY SETTINGS, GET HELP, WHAT CAN I ACCESS?, and SUBSCRIBE. A search bar is prominently displayed, containing the text 'sensor network' and a Search button. Below the search bar are tabs for Basic Search, Author Search, and Publication Search, along with links to Advanced Search and Other Search Options. The search results section shows 'Displaying results 1-25 of 103,511 for sensor network'. There are filters for Show (All Results), Per Page (25), and Sort By (Relevance). A sidebar on the left allows refining results by Content Type, with options for Conference Publications (89,157) and Journals & Magazines (13,413). The main content area displays a search result for 'Mobile Network Supported Wireless Sensor Network Services' by S. Krco, M. Johansson, V. Tsiatsis, I. Cubic, K. Matusikova, and R. Glitho, published in the IEEE International Conference on Mobile Adhoc and Sensor Systems in 2007. The result includes the page range (1-3), DOI (10.1109/MOBHOC.2007.4428690), and citation information. There are also buttons for Abstract, HTML, PDF (1939 Kb), and Creative Commons license.

Abstract

Document Sections

1. Introduction

2. Architecture

Abstract:

Wireless sensor networking research has been mainly focused on internal wireless sensor network issues such as MAC and routing protocols, energy saving, HW design and to some extent on the architecture of gateways that connect a wireless sensor network with the rest of the world. Wireless sensor networks have been seen as dedicated to one task by one owner. On the other hand, our research is focused on integration of wireless sensor networks into existing
