FTTP Deployment

FTTP Architectures for Multi Dwelling Units

Fiber to the Living Unit

Fiber to the Building

Broadcast Video over Coax
Interactive Video and Data
over VDSL or Ethernet

LEGEND

-  Fiber Cable
-  VDSL/Cat3
-  Coax Cable
-  Optical Splitter

The Verizon Digital Home

CMS
Customer Premises Management
System

TR-069 Home Network Management

Three Key VZ Investments:

BHR (Broadband Home Router): Robust network

MoCA (Multimedia over Coax Alliance): Inexpensive installation; operates in 50 MHz channels between 875-1525 MHz.

CMS: Remote management and configuration through standard protocol.

Enabling Technologies

- Digital Signal Processors (DSP)
- Semiconductor Lasers
- Erbium Doped Fiber Amplifiers (EDFA)
- Passive Optical Components (WDM combiners, splitters, connectors)
- Bend Insensitive Optical Fiber
- Battery Technology

Business Rationale

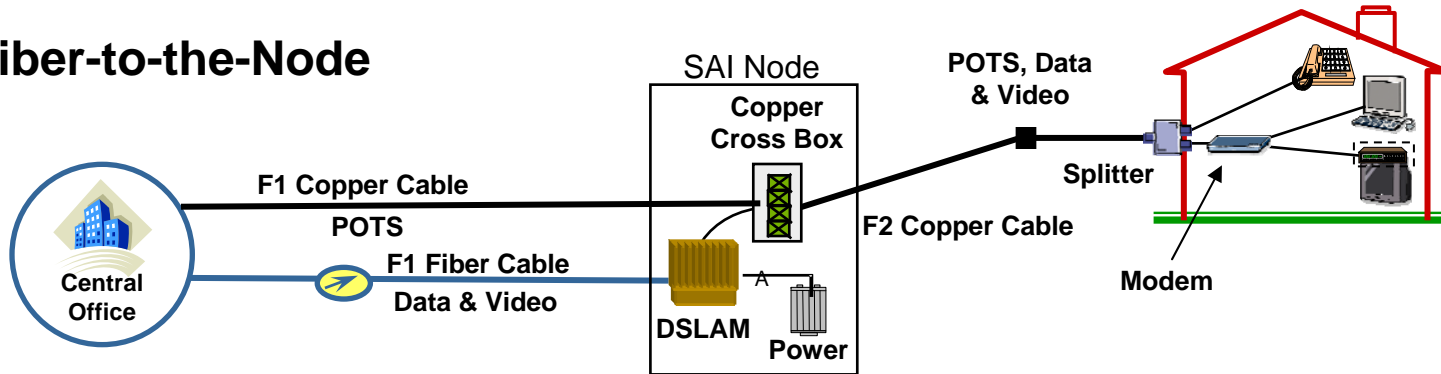

- Some copper distribution areas require labor intensive rehab
- Outside plant active electronics have very high maintenance costs
- Aerial outside plant is less expensive to build than buried facilities
- Continuous Internet traffic growth of ~50% per year

Capital Cost Structure of FTTH

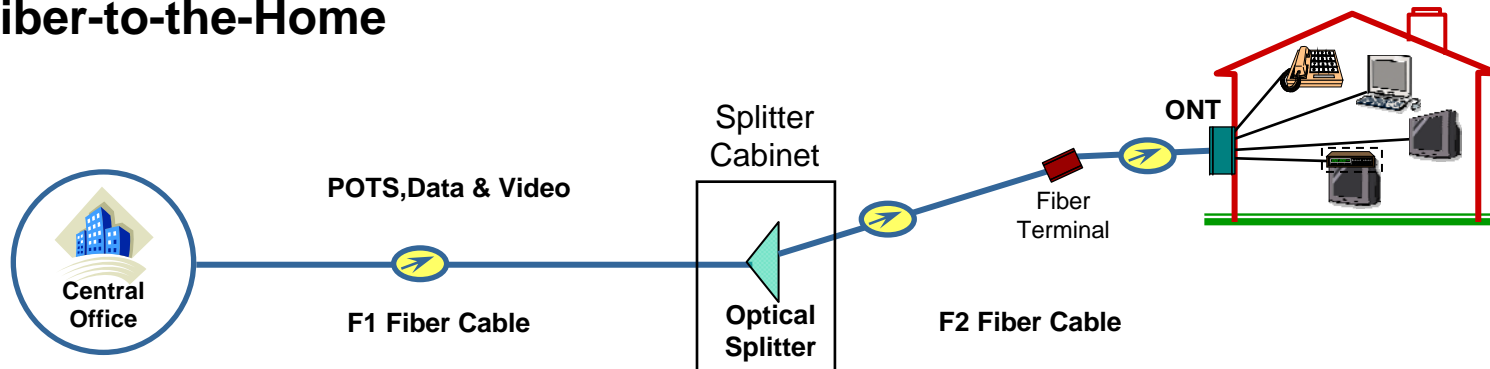

Total Cost of Ownership Savings

Fiber-to-the-Node

Fiber-to-the-Home

FTTH End-to-End Savings totals 67%

FTTP Maintenance Costs Savings

- **Fewer Reported Troubles in the Outside Plant (F1 & F2)**

- The POTS & DSL Outside Plant NRR is more than 5 times higher than FiOS Voice & Data

NRR Outside Plant	2005 YTD
Combined DSL + POTS	1.05
FiOS NRR - All	0.20

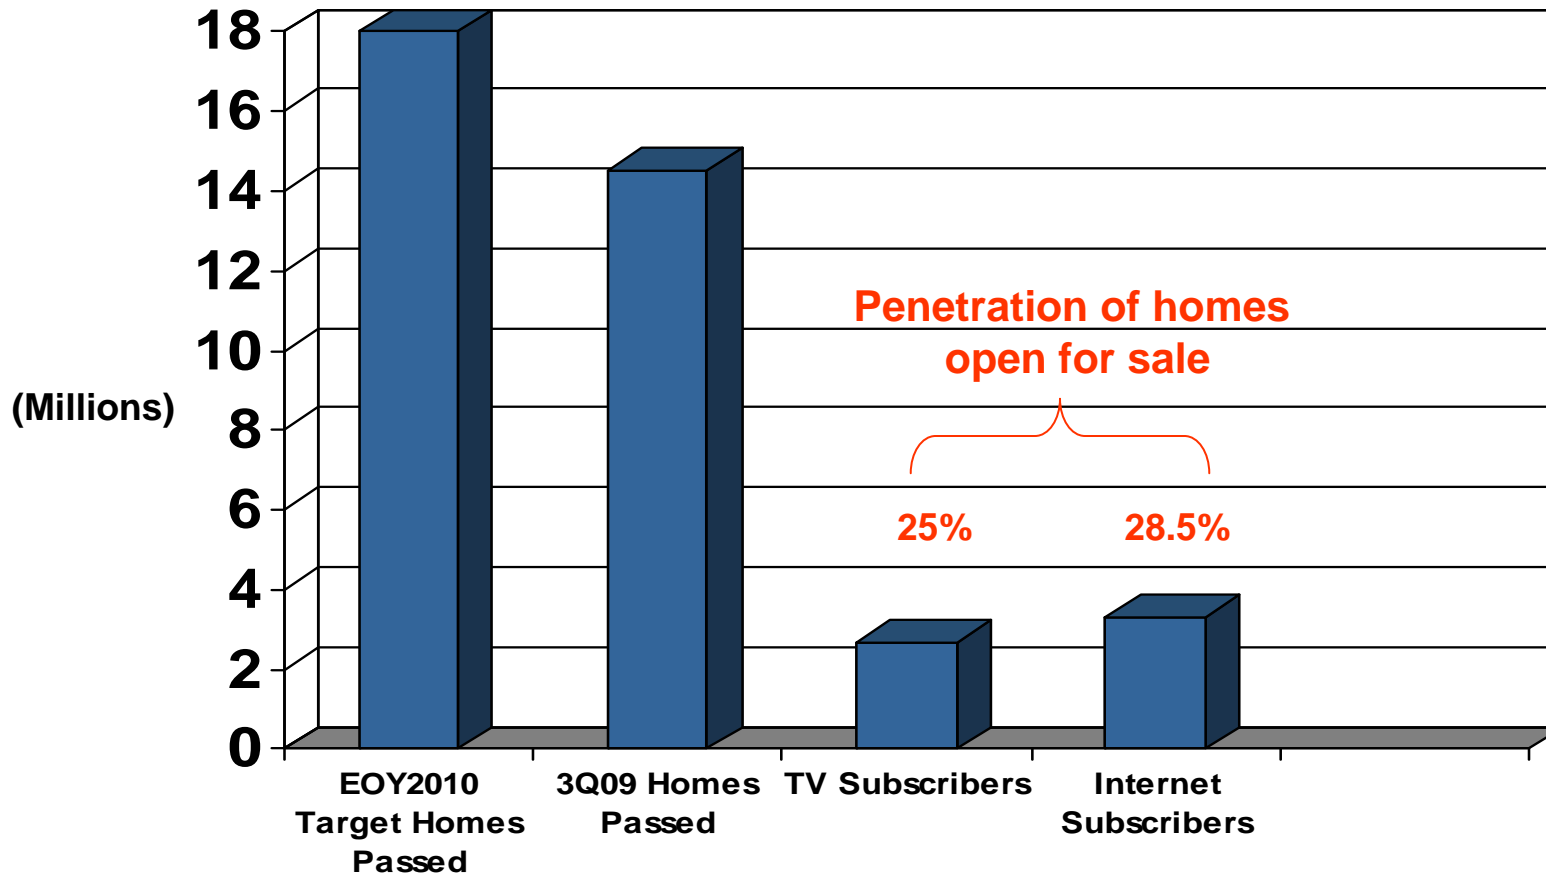

- **When Troubles are Reported, dispatches occur less often**

- DSL & POTS Average daily dispatched load rate is almost 2 times higher than FiOS
- FTTP network detects troubles and self heals

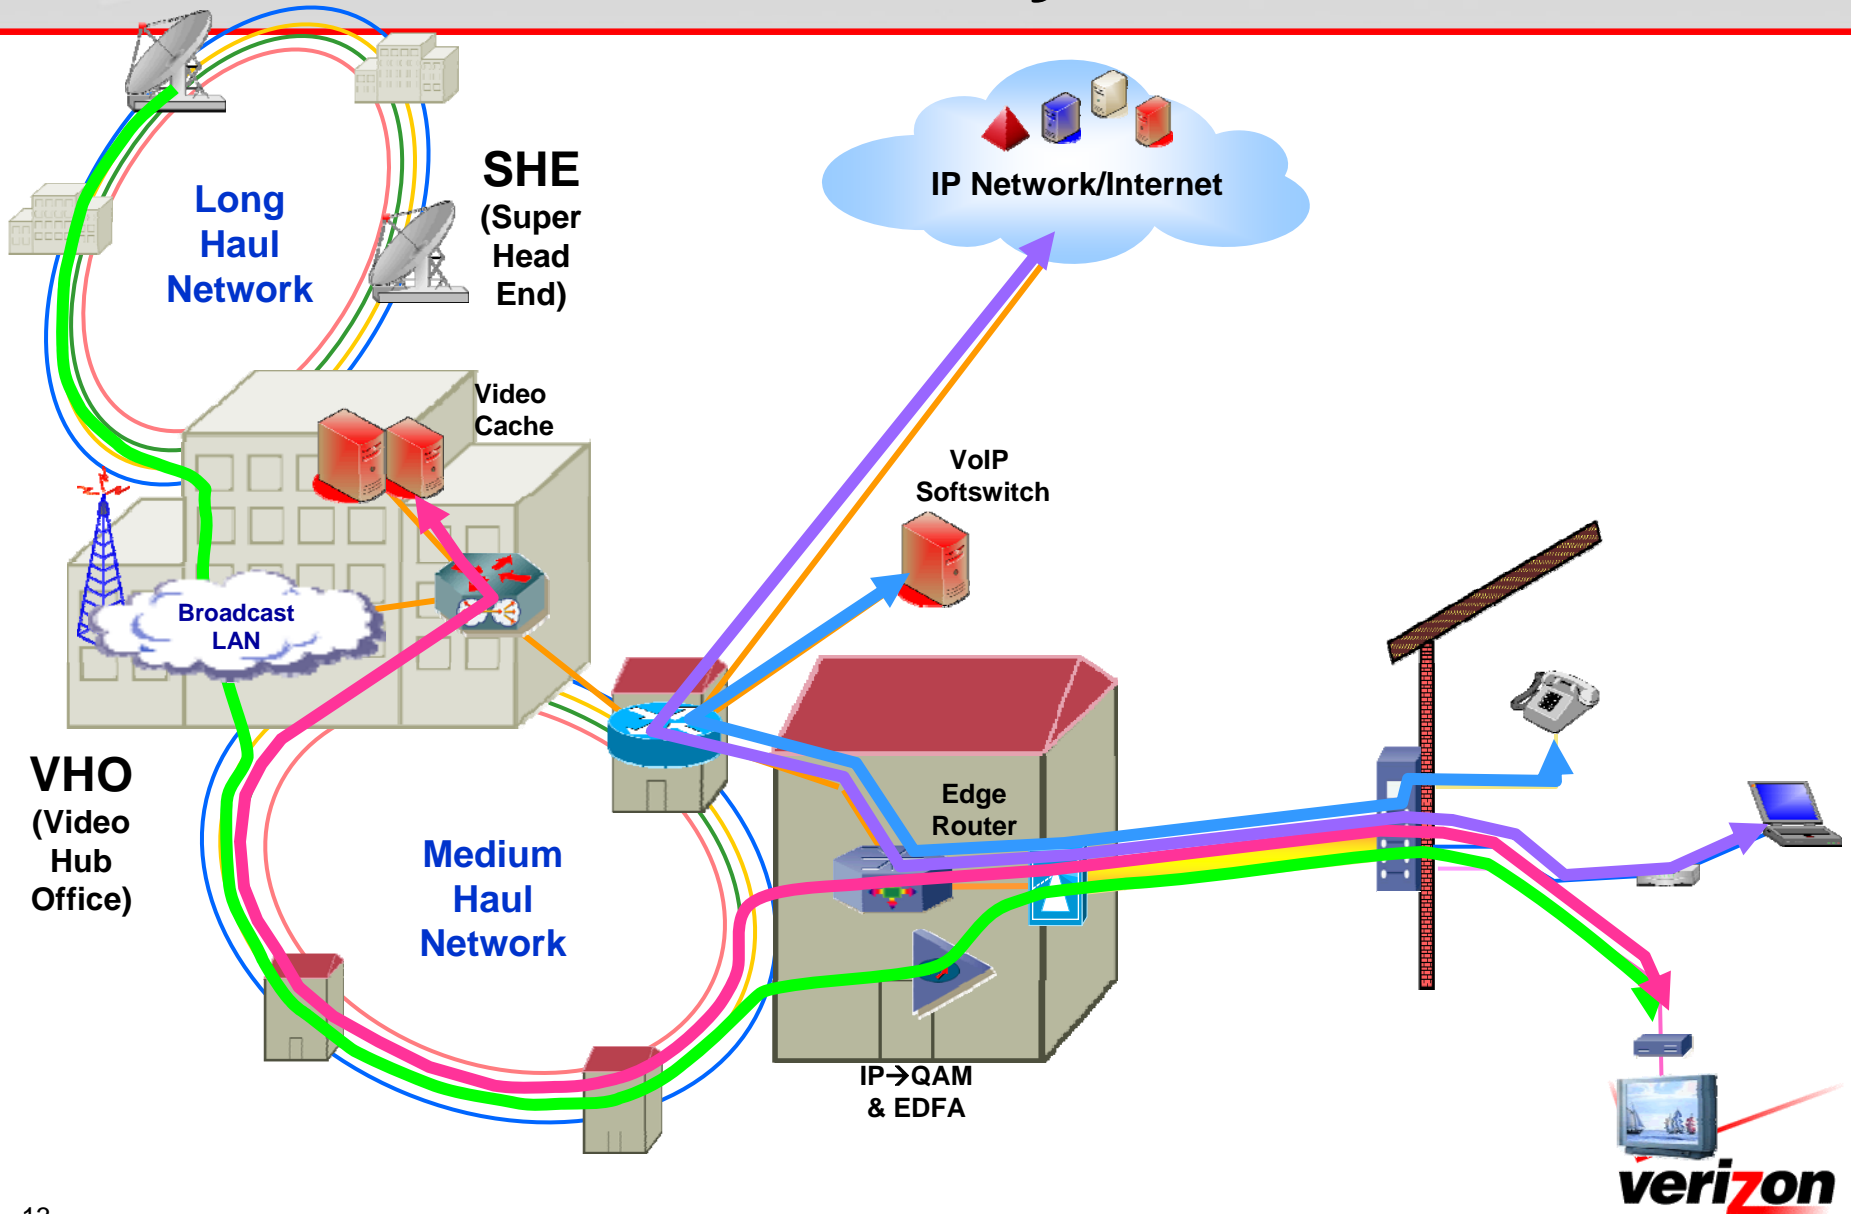

Dispatch Out Rate	2005 YTD
DSL & POTS	0.17%
FiOS Voice & Data	0.09%

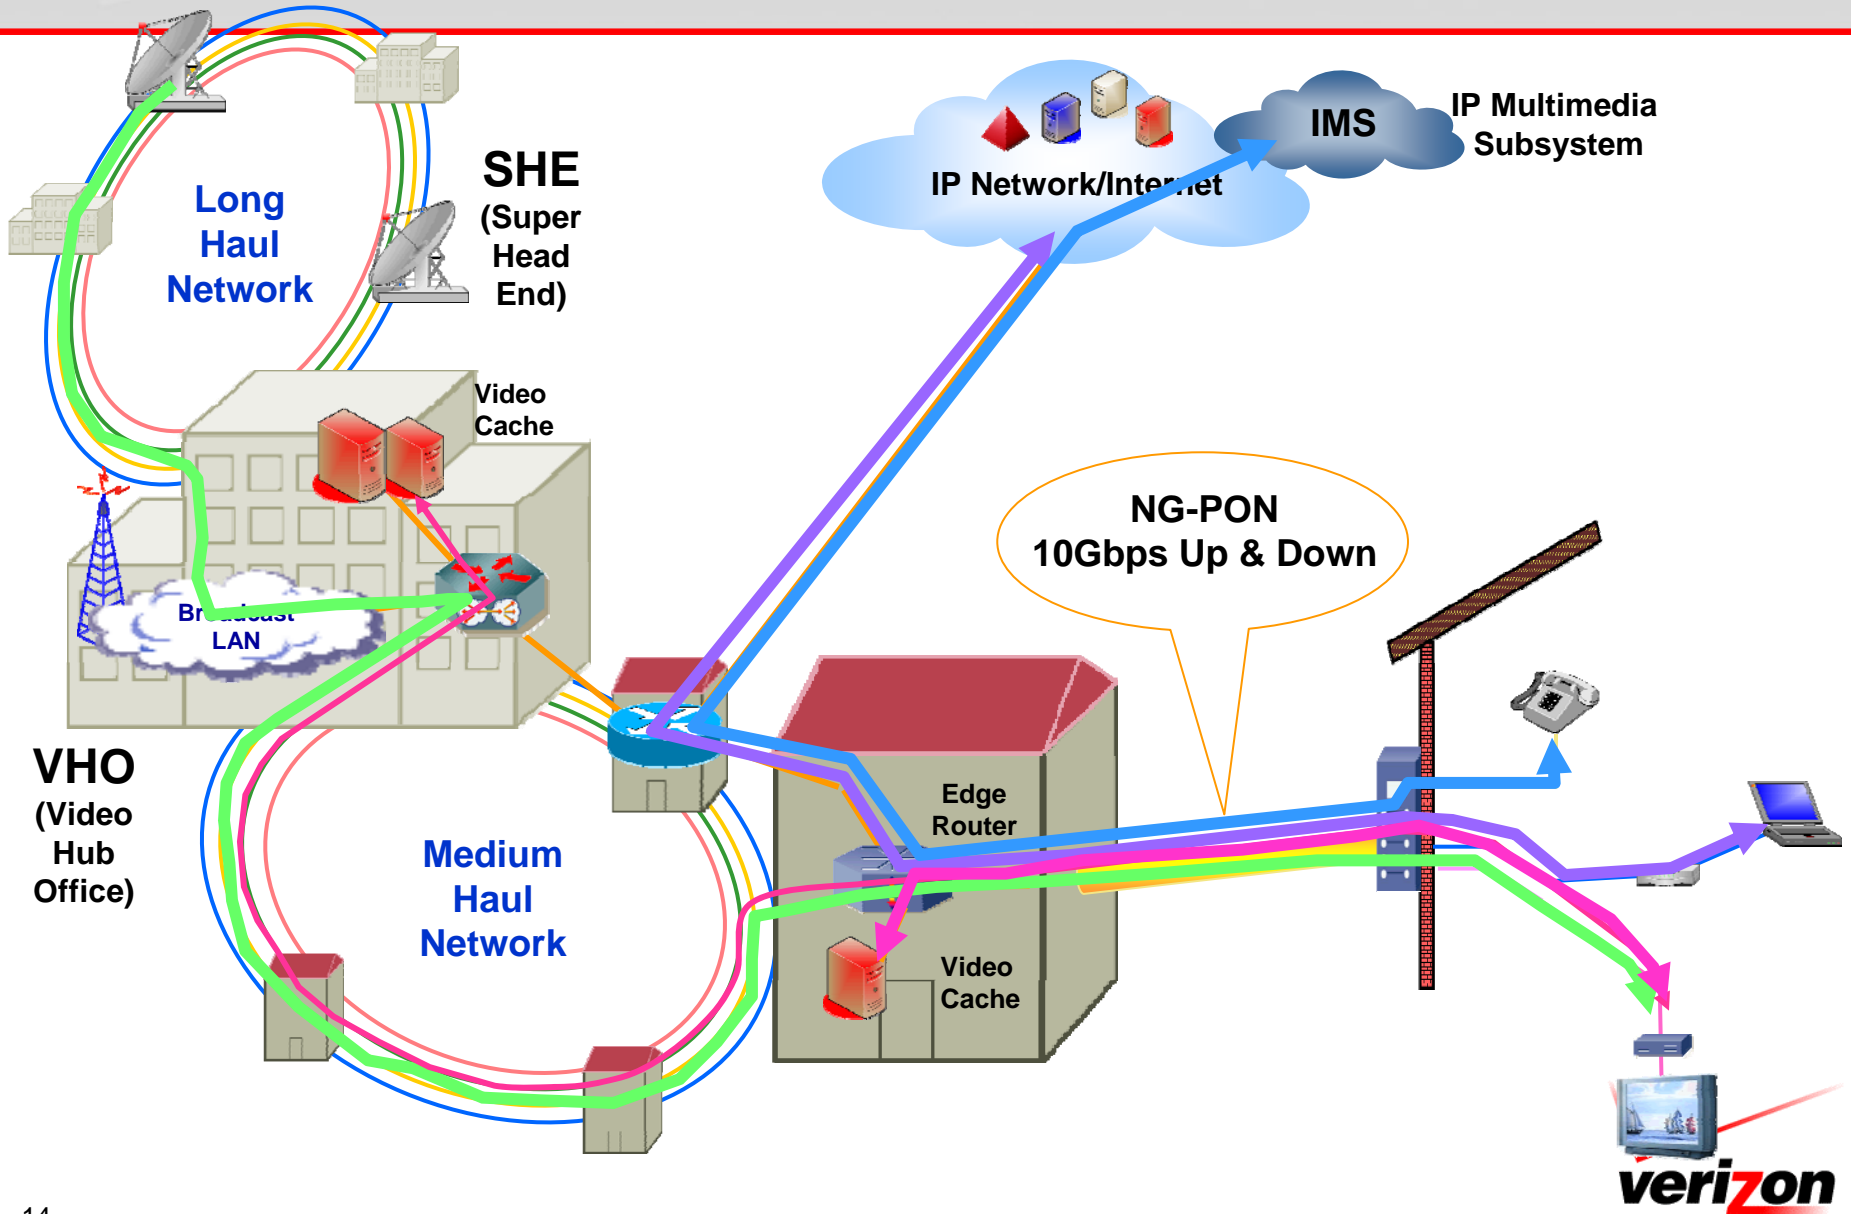

Deployment Status of FiOS (3Q09)

FiOS Architecture Today

FiOS Architecture Future

IP + Linear Broadcast

- **Set-Top Box merges IP channel with TV channel to create hybrid interactive experience.**
- **FiOS TV Widgets are small, Internet-enabled applications that run on a FiOS TV Set-Top Box. Widgets are written using the LUA scripting language.**

Emerging Advertising Opportunities

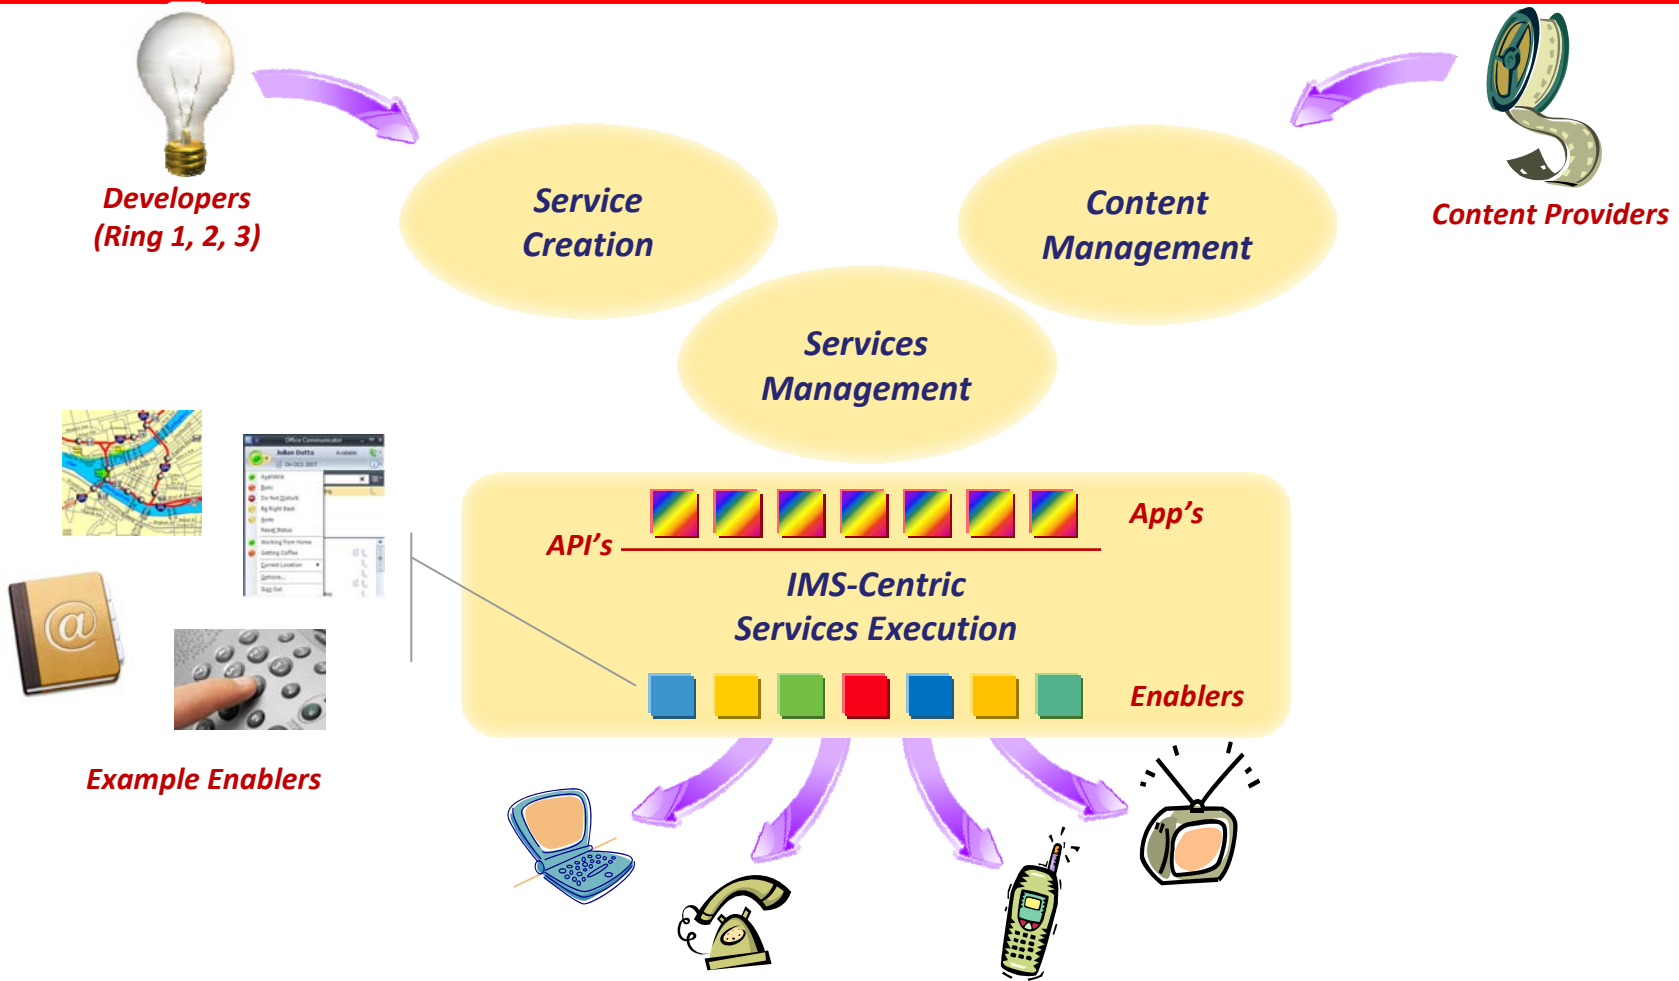

- **Dynamic VOD Ads** – Dynamically served pre and post-roll ads accompanying Free VOD content
- **Interactive TV Ads** – EBIF-enabled nationally broadcasted TV ads with interactive capabilities
- **Hyper-Local Geo-targeted Ads** – zip code + 4 with better than the 60% accuracy of IP advertising
- **Sponsored Widgets** – Verizon Developer Network to ‘skin’ widgets

Example:
Philadelphia

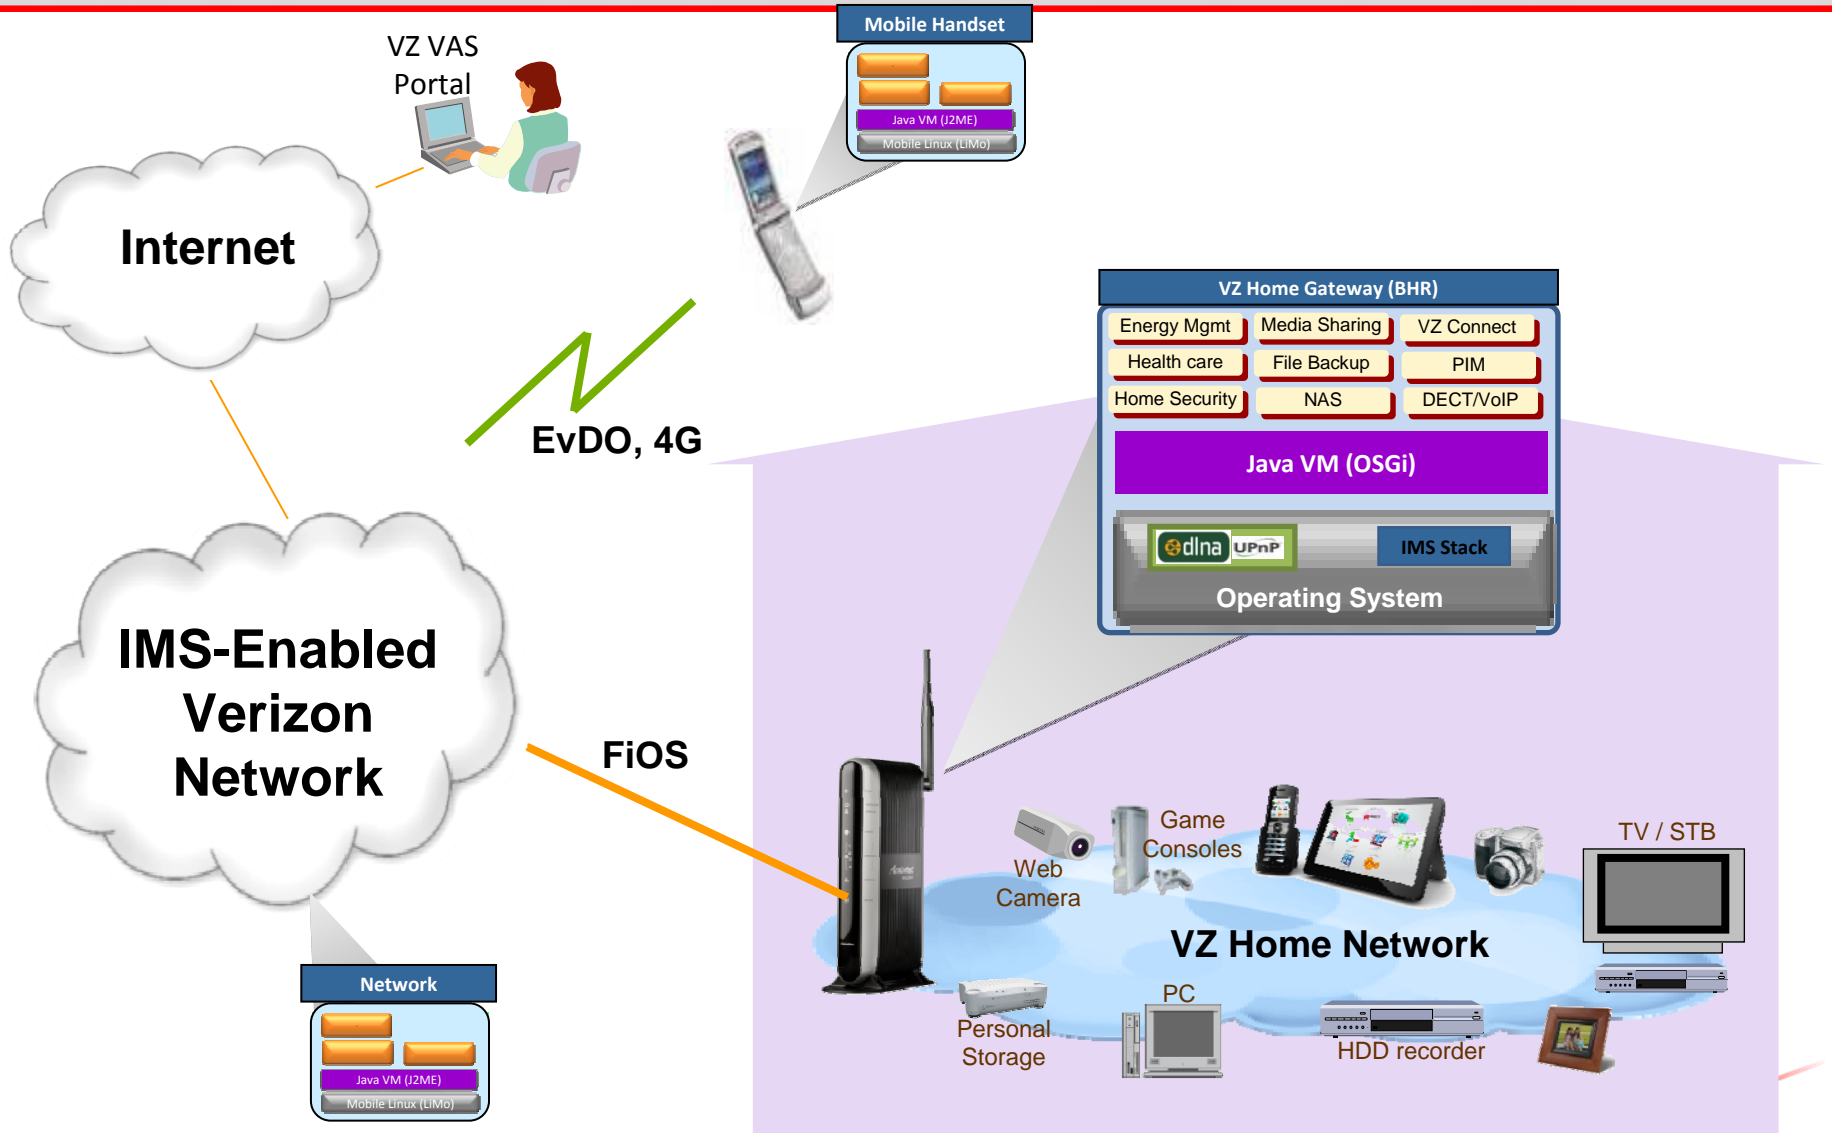

A Platform for Innovation

**FiOS Broadband + Open Platform + Enablers
= Delivering Innovation to Customers**

Collaborative Intelligence

Service Genres

- Communications
- Media Access (Including Internet TV/Radio)
- Media Sharing
- Home / Business Security
- Home Automation
- Utility Services
- Distribution/Delivery Logistics
- Advertising
- Gaming
- N-Screen
- Telemedicine

**Your Companies will
Shape the Services**

Summary

- Fiber to the Home is the only technology to meet near term and long term fixed bandwidth demands without additional outside plant investment.
- We are evolving FiOS to continually enhance the user experience (bandwidth, video content choice and quality, services)
- We are opening our networks to accelerate service innovation
