Rochester, Minnesota

Program: Dr. George W. "Woody" Beeler  
of the Mayo Clinic will discuss —  
"The Electrical Activity in Nerve and Muscle"

Coffee and Doughnuts Will Be Served After the Meeting

#### Random Noise

For those of you who had planned on attending last January's meeting, it has been rescheduled for the future, provided of course that our pleasant Minnesota weather doesn't interfere. The Program Committee, chaired by Wayne Casanova, met January 30 and prepared a very interesting and enjoyable program for the 1969 calendar. This schedule should hopefully be contained in the next meeting notice.

Our February meeting should be of real interest to all our members, especially those of the Biomedical Professional/Technical Group. If you recall from various journal articles, many new cybernetic devices operate from the electrical signals of the human body. If you have an interest in this area, we hope to see you at the meeting.

R J Keller, Publicity Chairman
