“Acceptance Testing and Commissioning Program Development” by: Mr. Steve Metzger - Region Sales Manager, Electro-Test Pacific Central Region

Acceptance testing and commissioning are important factors necessary to insure the safe and reliable operation of a facility. Millions of dollars can be spent building a power system that may not function as intended when necessary.

What are the elements of a well-developed acceptance testing and commissioning program? What steps are essential for the program to be properly implemented? How can an engineer avoid the errors made by others, mistakes that can damage reputations and leave them subject to liability? Steve Metzger of Electro-Test, an experienced specialist in this field, will give a presentation that will address these significant issues.

Steve Metzger has over 23 years experience in the electrical distribution equipment and electrical engineering service industries. A product of the Westinghouse Graduate Program in 1982, Metzger has been involved in electrical projects as far ranging as space launch complexes to re-electrification of college campuses. An eleven-year employee with Electro-Test, Metzger has unique insights into the diverse service sets that Electro-Test offers and the equally diverse market places in which they provide these services. Steve most recently was awarded an MBA in Technology Management.
