Subject: Power Monitoring Systems

Power monitoring systems can provide the owner with real benefits in monitoring of power quality events, equipment operations, load flows, and energy conservations. With the increased cost of power, gas and other utilities, the need for a reliable power monitoring systems has never been greater. The careful analysis of what is presently available in the market and the exact needs of the customer is necessary in order to write a quality specification for power monitoring systems. The discussion will provide the audience with information on electrical monitoring equipment, as well as ways to monitor water, air, and gas utilities. We will further review software options from enterprise server systems to systems that require no software, just an IP address.

Rick Hofstetter is a PowerLogic Business Development Specialist at Schneider Electric and is responsible for the Northern California and Northern Nevada areas. Rick has been with Square D Schneider Electric for 16 years and has been NICET certified in electrical testing. He has been involved in the start up and commissioning of Load Preservation Systems. He is a member of IEEE Santa Clara Valley Section.
