

New Biomimetic Robotic Systems & Advanced Vehicles

Prof Ikuo Yamamoto
University of Kitakyushu, Japan

The presentation will begin with a general introduction to robotic research in Japan. It will then describe the research work undertaken by the author in the design and development of remotely operated and autonomous underwater vehicles, and robotic fish. New approaches in biomimetic robotics for surgery and space applications will then be given. In the final part of the presentation flight robots and a network environment observation system will be discussed.

Date: 2:00pm, Tuesday, 3 March 2009

Venue: Stokes Room, Building 83, Cranfield University

All Welcome
