

IEEE has always been a vibrant and caring family to me. I still remember clearly that I led my street soccer team to first join the IEEE Games day in National University of Singapore (NUS), my team won the Gold Metal of Street Soccer that year. Even the next year, our team continued the Championship in this event.

From my very first contact with IEEE NUS Student Branch, I knew this is the place to grow with. In my first year in NUS, I joined IEEE as an IEEE Games Day station master. During the second year, I started to join a sub-committee as a member. In the third year, I took one step further to run for the IT Chair in student branch and won. In my final year in NUS, filled with ambition and responsibility, I ran for the presidential election of IEEE NUS Student Branch. Yes, I won and was given the opportunity to spearhead this entire committee. After graduation, I continued to be actively involved in IEEE by working with GOLD Affinity Group. In my second term of office in GOLD, I was privileged to be take up the responsibility and become the Chair.

I was born in Shanghai, China. Three months after I was enrolled in Fudan University, I received scholarship offer from Singapore Ministry Of Education, thus I was transferred to NUS, who was ranked 22nd in year 2006's "*Times Higher Education Supplement*" World University Rankings. I studied in NUS with a major in Computer Engineer and a minor in Management Of Information System. Now as a young professional, I have so far gained working experience in semiconductor and IT industry. I like playing snooker, tennis and golf as a means to make friends.

Best wishes,
Jeffrey Tan Qing
Chair, IEEE Singapore GOLD Affinity Group
