MicroVolunteering

Whaaaaat? Volunteering a microprocessor?

It is:

- Exercising Systems Engineering practices

- Deconstructing the Section activities into the smallest possible, doable tasks

- Try to not overwhelm/scare away volunteers

Analogy

OK, how?

Ideas? What small tasks need to be done by each section?

Assignment, turn to your neighbors and form a team (3 per team – new people!) and brainstorm on tasks that can be done.

Example: Our section wants to hold a YP event at a local microbrew (tour, a few beers, food available). Research and tell us which one and find days/times available.

Cookbook

- Once you identify these small ideas, perhaps you could create a process (perhaps the process writing could be a micro-task?)

- Use the existing cookbook templates to create your own processes for your Section

- Completed cookbook sheets can be handed to people to complete micro-tasks.
