### [IEEE R3] Central Georgia Section Chair's Report

The IEEE Central Georgia Section has had good success at increasing attendance at section meetings when inviting and participating in concert with the Dixie Crows, another professional/technical organization which has a large member base in our local area. We have recently held a section meeting/event in which we visited their annual, local, technical conference, the Dixie Crow Symposium.

Our February presentation concerning taxonomical classification of fossils using computer image analysis was well attended. The research has generated a number of high-school science projects and other STEM activities.

We continue to seek opportunities for member participation in STEM activities such as judging science fairs, etc.

We continue to support and look forward to continued activities in concert with our fellow Georgia sections.
