

CIMSA 2006

2006 IEEE International Conference on Computational Intelligence for Measurement Systems and Applications

La Coruña, Spain, 12-14 July 2006

Sponsored by the IEEE Instrumentation and Measurement Society and the IEEE Computational Intelligence Society

General Chairs

Fernando Lopez Peña, Universidade
da Coruña, Spain
Enrique Ruspini, SRI, USA

Technical Program Chairs

Fabio Scotti, University of Milan, Italy
Leonid Perlovsky, Air Force Research
Laboratory, USA

Local Arrangement Chair

Richard J. Duro, Universidade
da Coruña, Spain

Registration Chair

Lee Myers, Myers-Smith Inc, USA

Steering Committee

Cesare Alippi, Politecnico di Milano,
Italy
David Braudaway, USA
Evangelia Micheli-Tzanakou,
Rutgers University, USA
Robert Myers, IEEE, USA
Vincenzo Piuri, University of Milan, Italy
Enrique Ruspini, SRI, USA
Mel Siegel, CMU, USA

Symposium Coordinator

Robert Myers, Myers-Smith Inc., USA

Web Site

The wide and increasing needs of adaptable and flexible solutions for many industrial, environmental, and engineering applications point out the importance of using design methodologies and implementation technologies with high ability of adaptation and evolution. Soft computing is one of the most relevant answers to such needs: neural networks, fuzzy logic, and genetic/evolutionary algorithms are fundamental keys to tackle these difficult problems. On the other hand, accuracy and uncertainty issues as well as suited data acquisition systems must be carefully considered in these applications since the quality of the solution greatly relies on them. Up to now, analysis and experiments have been performed by scientists and practitioners mainly to understand the underlying technologies and methodologies, but without any specific focus on the mandatory need of a quantitative assessment and a metrological analysis. Measurement science and technologies are in fact vital to ensure the correct and effective use of soft computing technologies in real environments. CIMSA 2006 will continue the exciting experience of the previous editions by filling this gap in knowledge and practice, by focusing on the quantitative aspect of measurement issues for industrial, environmental, and engineering applications.

Papers are solicited on all aspects of soft computing technologies related to measurement systems and the related applications, from the points of view of both theory and practice. This includes but is not limited to: intelligent measurement systems; accuracy and precision of neural and fuzzy components; intelligent sensor fusion; intelligent monitoring and control systems; neural and fuzzy technologies for identification, prediction, and control of complex dynamic systems; evolutionary monitoring and control; neural and fuzzy signal/image processing for industrial and environmental applications; image understanding and recognition; soft-computing technologies for robotics and vision; soft computing technologies for medical and bioengineering applications; hybrid systems; fuzzy and neural components for embedded systems; hardware implementation of neural and fuzzy systems for measurements; neural, fuzzy and genetic/evolutionary algorithms for system optimization and calibration; neural and fuzzy diagnosis of components and systems; reliability of fuzzy and neural components; fault tolerance and testing in fuzzy and neural components; neural and fuzzy techniques for quality measurement.

SUBMIT EXTENDED ABSTRACTS OR DRAFT PAPERS BY 10 MARCH 2006

Details for the submission and all information concerning the symposium can be found at the symposium web site at <http://ewh.ieee.org/soc/im/cimsa/>. Acceptance/rejection will be emailed by 15 April 2005. The final manuscript is due by 30 May 2006. Submission implies willingness to register at the symposium, pay the registration fee and present the paper. Papers will be included in the proceedings only if at least one author will register and pay the registration fee by 30 May 2006 (member and non-member only are acceptable to this purpose) - no exceptions. If an author covers more than one paper with her/his registration to guarantee inclusion in the proceedings, she/he must pay a 50 US\$ surcharge for each paper in excess of one.

CIMSA 2006 is held after the 2006 IEEE International Conference on Virtual Environments, Human-Computer Interfaces, and Measurement Systems (La Coruña, Spain, 12-14 July 2006).
