23/05/2020

SUB: Report on webinar "Awareness on cyber security and Cyber Crimes "
Date: 23rd May 2020
Time: 11:00AM-01:00PM
Venue: Cisco WebEx Meet
Speaker: Mr Santhosh chaluvadi

Founder & CEO
Supraja Technologies

No. of Participants: 90

Objective: The main objective of the event is everyone must get awareness on the Cyber Crimes happening around them and must be careful without being an victim of those crimes

The speaker started the session asking few questions to the participants like 1. Have you ever lost your mobile?

2. If so what did you do to get back it?

The session was very interactive he have interacted through the chat box and replied each and every question being asked and suggested all the possible measures which must be taken to avoid the cyber crimes

The first topic he started in discussion was

HOW SECURE IS MY PASSWORD

For this question he primarily suggested not to use a repeated password for more number of sites and he have suggested a website howsecureismypassword.net to know the strength of the password being set .He have also suggested to use space bars when we set passwords and he have clearly demonstrated how long will it take a password to be hacked if we set it simple

EMAIL IS HACKED OR NOT?

For this question his answer was to check the respective email id in the website haveibeenpwned.com if it show as pwned it means it is hacked and he have strictly insisted not to use that email from then

Like this he raised questions to himself and clearly answered each one of them

Later he have also said any of the free or cracked versions of OS or ANTI-VIRUS must not be preferred as the security in the cracked version is very less and there is high chance of getting hacked

He have also suggested to convert the user account to Microsoft live then there would be less chances to hack.

And then he addressed about the url's and links we get as we are being rewarded and awarded with bonus point and products he strictly insisted there is risk of hackers hack your mobile or pc using such links for example the letter p resembles with the Greek alphabet p(say rho) so they might use rho instead of letter 'p' and send you the fake links being produced Santosh also said that not to even copy and paste because there would be no difference in it

Next he said that if u have any doubt on any file then upload it in virustotal.com then check it scans the data and give you the accurate results

Santosh also said about key scrambler software which turns the characters into another characters it just encrypts the given data to another

The speaker suggested to install the app SEP to know whether our smart phone is hacked or not.

It can also be used to analyze what is exactly happening on smart phone or what's wrong going with the smart phone It also shows description and errors It also shows the paths where the error has occurred.

The speaker then suggested not to encourage any open networks as they are suspicious and not much safer in security aspect.

When the participants have requested for the suggestion of the applications which they can install in their mobile and help them not to get hacked the speaker suggested app named SPYWARE DETECTOR-Anti spyware software

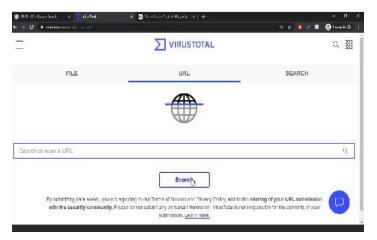

And then the Q&A session went on and the speaker have covered all the doubts in the time and it was a very great interactive and proactive session.

Cf. H. Instantia HOW SECURE IS MY PASSWORD? would take a computer about 4 HOURS 10 to stack your password not by Dechtere to casete and remember stronger passwords? We free TIP: USE A PASSWORD MANAGER TO SECURE AND EASILY RENEMBER YOUR PASSWORDS "Deshiere is life changingly groat. Certin" - Devid Peque (The New York Three) Get Dashiane + It's Fre
