

Redefining Ethernet Performance With OT Software-Defined Networking

Trent Bridges – Application Engineer II - Automation

IT versus OT networks

Challenges of IT designed for convenience

- Designed for plug-and-play
- “Conveniently” does things we don’t want
- Uses reactive failover
- Lacks cybersecurity profile
- Provides topology-dependent performance
- Is difficult to test
- Leads to blocked ports and reduced network efficiency

Communications Networking

**BACK TO
BASICS**

Dependable communications design goals

- ✓ Determinism
- ✓ Precise time
- ✓ Low latency
- ✓ Fast healing
- ✓ Security
- ✓ Utility-rated equipment

Traffic-engineered networking

Proactively designing
and planning
source-to-destination
transport of each
data frame

Predetermining
reaction of
communications
infrastructure to
network events

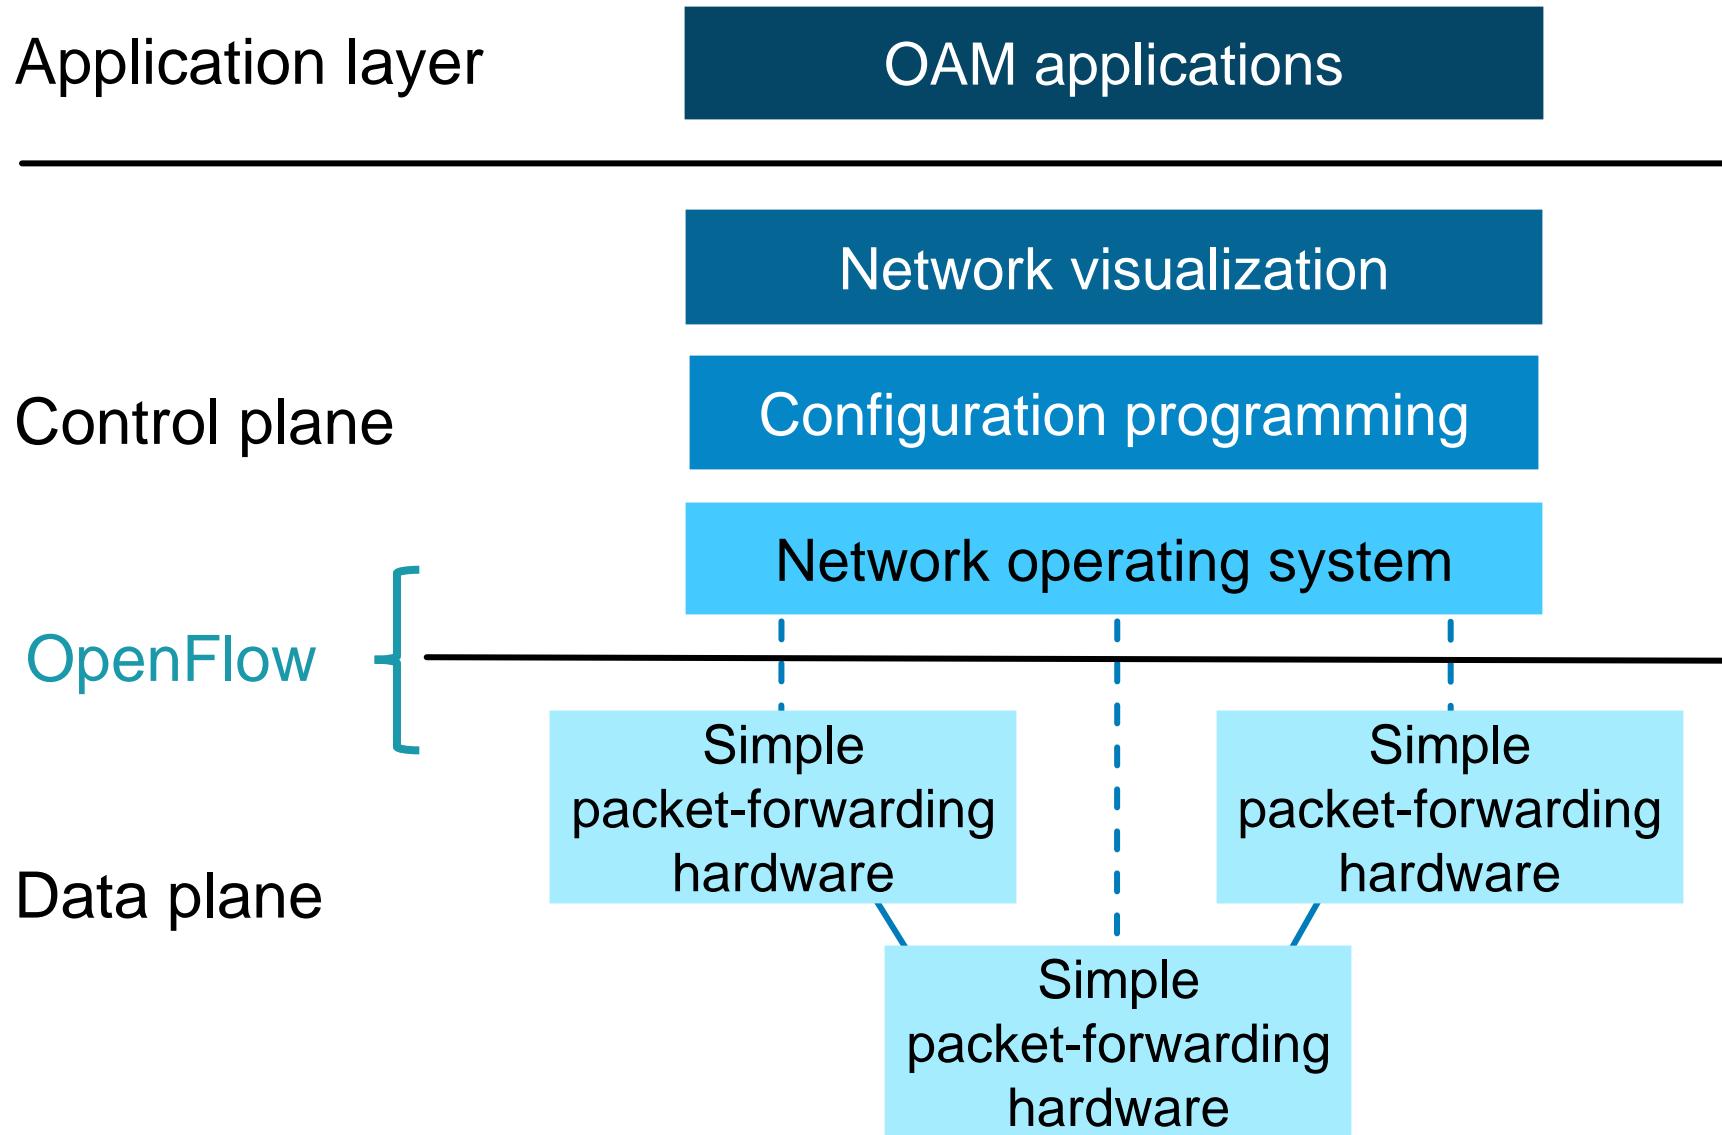

Bringing traffic engineering to Ethernet LANs

Innovating substation Ethernet

- Applying SDN to enable engineering of best network
- Enhancing performance, configuration, and management of proactive OT and dynamic IT networks

Implementing SDN with OpenFlow

SEL SDN solution

Improving Ethernet performance in mission-critical applications

SEL-2740S

Software-Defined
Network Switch

SEL-5056

Software-Defined
Network Flow Controller

Getting to know SDN terminology

Flow

Single communications session that matches ingress rule and has a set of forwarding instructions

OpenFlow

Open-source standard that defines how flow controller and switches interoperate

Flow controller

Central controller that programs switch flow tables

How SDN works

Control plane inspects each Ethernet packet and performs the following functions

Match fields

Match rule based on portion of Ethernet packet

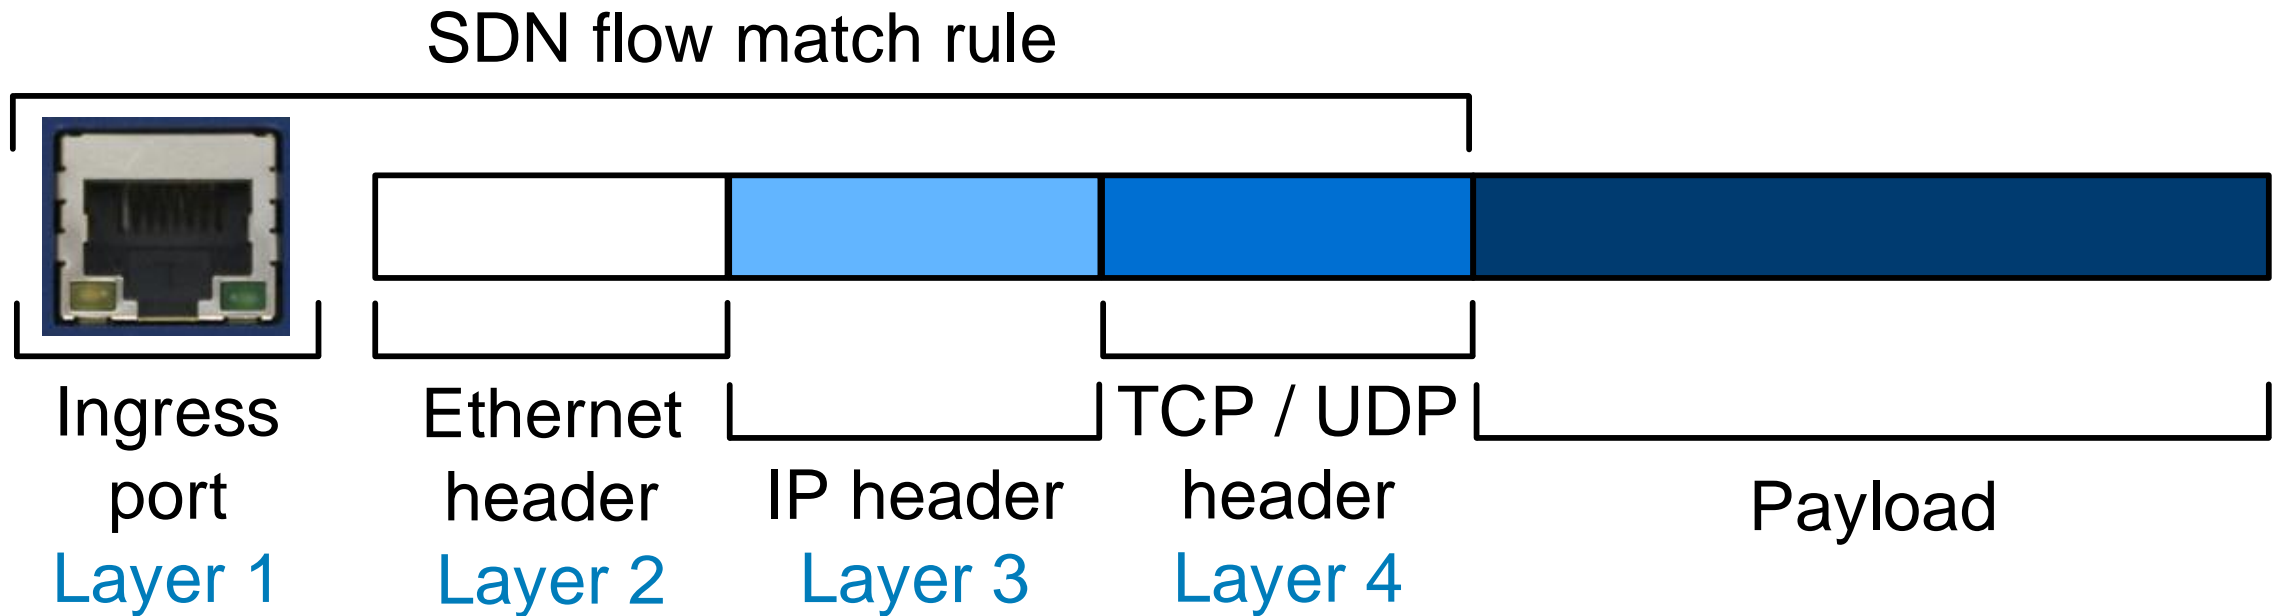

Instructions

Perform one or more programmed actions

Counters

Increment counters and send counter data to centralized point

Multilayer matching rules forward approved packets

OpenFlow match / action example

L2 unmanaged switch

Physical Port ID	Src MAC	Dst MAC	Ether Type	VLAN ID	IPv4 Src	IPv4 Dst	TCP/UDP Src	TCP/UDP Dst
*	*		*	*	*	*	*	*

00:30:A7:06:11:97

Packet

OpenFlow match / action example

L3 forwarding

Physical Port ID	Src MAC	Dst MAC	Ether Type	VLAN ID	IPv4 Src	IPv4 Dst	TCP/UDP Src	TCP/UDP Dst
*	*		*	*	1.1.1.2	2.2.2.2	*	*

Action
Output forward Port 3

Packet

OpenFlow match / action example

Application-specific forwarding

Physical Port ID	Src MAC	Dst MAC	Ether Type	VLAN ID	IPv4 Src	IPv4 Dst	TCP/UDP Src	TCP/UDP Dst
*	*		*	*	1.1.1.2	2.2.2.2	*	TCP 20000

Action
Output forward Port 4

Packet

Connection service types

Add CST

	Alias ▲ ₁	Status	Priority	Actions
✓	ARP	Success	2000	
✓	DNP3-TCP Client	Success	2000	
✓	DNP3-UDP Client	Success	2000	
✓	Fast Message Client	Success	2000	
✓	GOOSE	Success	2000	
✓	HTTP Client	Success	2000	
✓	HTTPS Client	Success	2000	
✓	ICMP	Success	2000	
✓	MMS Client	Success	2000	
✓	Modbus Client	Success	2000	
✓	NTP Client	Success	2000	
✓	PTP Power Profile	Success	2000	
✓	SEL-5056: In Band Path	Success	65000	
✓	SSH Client	Success	2000	
✓	Synchrophasors TCP	Success	2000	
✓	Synchrophasors UDP	Success	2000	
✓	Telnet Client	Success	2000	  

Status: Success

Match Fields

+

≡

Name ▲ ₁	Value	Mask
✓ EthType	Ipv4	
✓ IpProto	TCP	
✓ TcpDst	23	

||

Define a match rule

Consist of user-defined list of match fields

Options

Creating a logical connection with CST

- 1 Select physical device
- 2 Select **CST**
- 3 Select **End Point**
- 4 Click **Create**

The screenshot shows the 'Primary Motor' configuration page. At the top, it says 'Primary Motor' and 'Adopted'. Below this are buttons for 'Show Neighbors', 'Hide Neighbors', 'Show Hosts', 'Hide Hosts', 'Show Logical Neighbors', and 'Hide Logical Neighbors'. The 'Configuration' section has a dropdown menu currently set to 'Primary Motor', with a red circle '1' next to it. Below the dropdown are buttons for 'Adopt Configuration', 'Adopt Default Configuration', 'Unadopt', and 'Remove'. The 'Add Logical Connection' section at the bottom has two dropdown menus: 'Select CST:' with 'DNP3-TCP Client' selected (marked with a red circle '2'), and 'Select End Point:' (marked with a red circle '3'). Below these is a 'Create Unicast' button (marked with a red circle '4').

Reactive SDN in operation

Typical IT SDN

Proactive SDN in operation

SEL OT SDN

Proactively engineer traffic for reliability

SDN fast failover is awesome!

Product	Topology	Healing method	Failure point	Healing time
Manufacturer Device 1	10-node ring	STA (rapid PVST)	L4	97 ms
Manufacturer Device 2	4-node ring	STA (RSTP)	L1 or L2	60 ms
SEL-2730M	10-node ring	STA (RSTP)	L4	10 ms
SEL-2740S	10-node ring	SEL SDN fast failover	L4	<100 μ s

Engineering benefits

- ☑ Centralized traffic engineering
- ☑ Faster healing
- ☑ Predetermined failover
- ☑ Greater situational awareness
- ☑ Path- and packet-level control

Performance benefits

Integrate seamlessly with existing infrastructure

OpenFlow 1.3 support

Ensure mission-critical application performance

<100 μ s failover

Avoid performance delays

No blocked ports

Cybersecurity benefits

Move to enhanced security model

Employ deny-by-default architecture

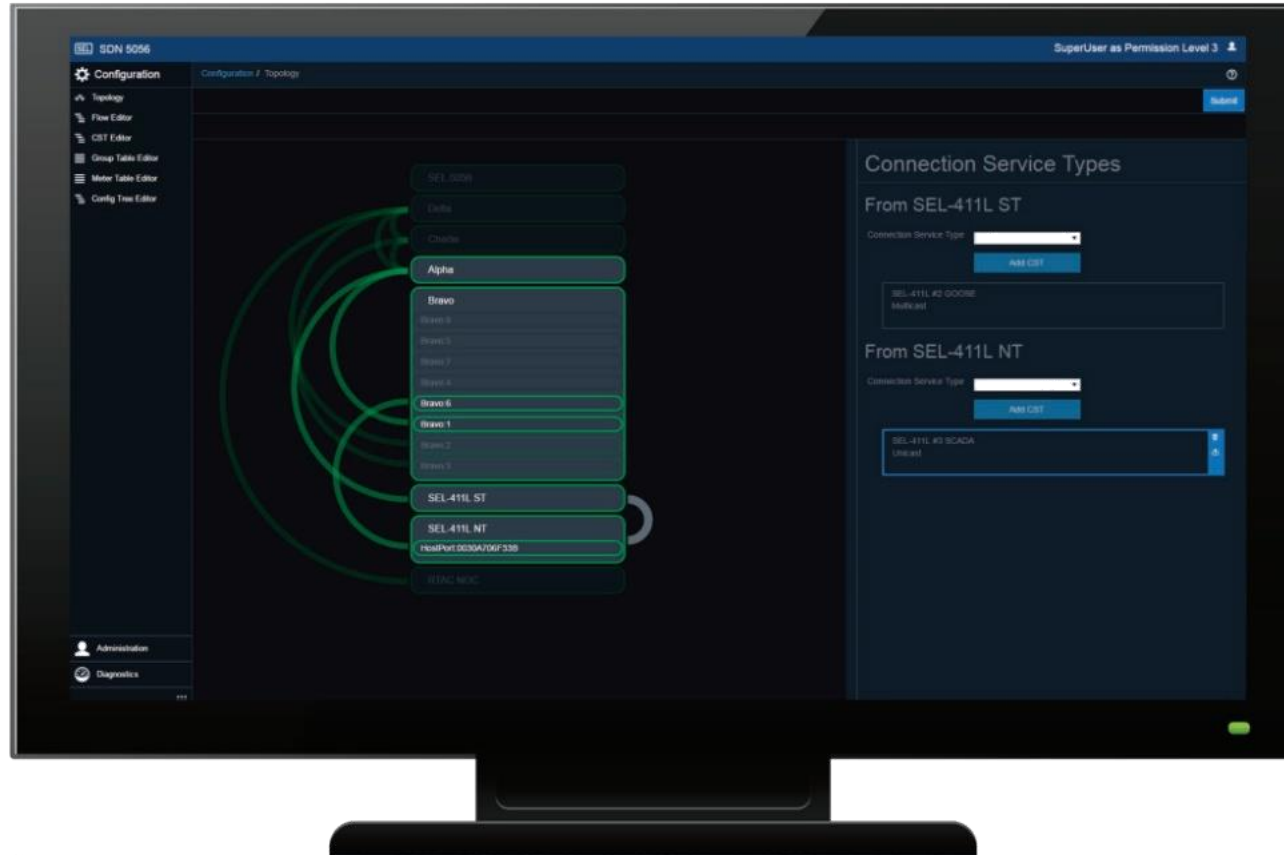

Secure control plane

Eliminate MAC table and BPDU spoofing

Improve situational awareness (packet and byte)

Know which flows are on your network and where they are all the time

SEL-5056 Flow Controller simplifies network design and testing

- ✓ Centralized network management
- ✓ Programmatic network testing
- ✓ Greater situational awareness

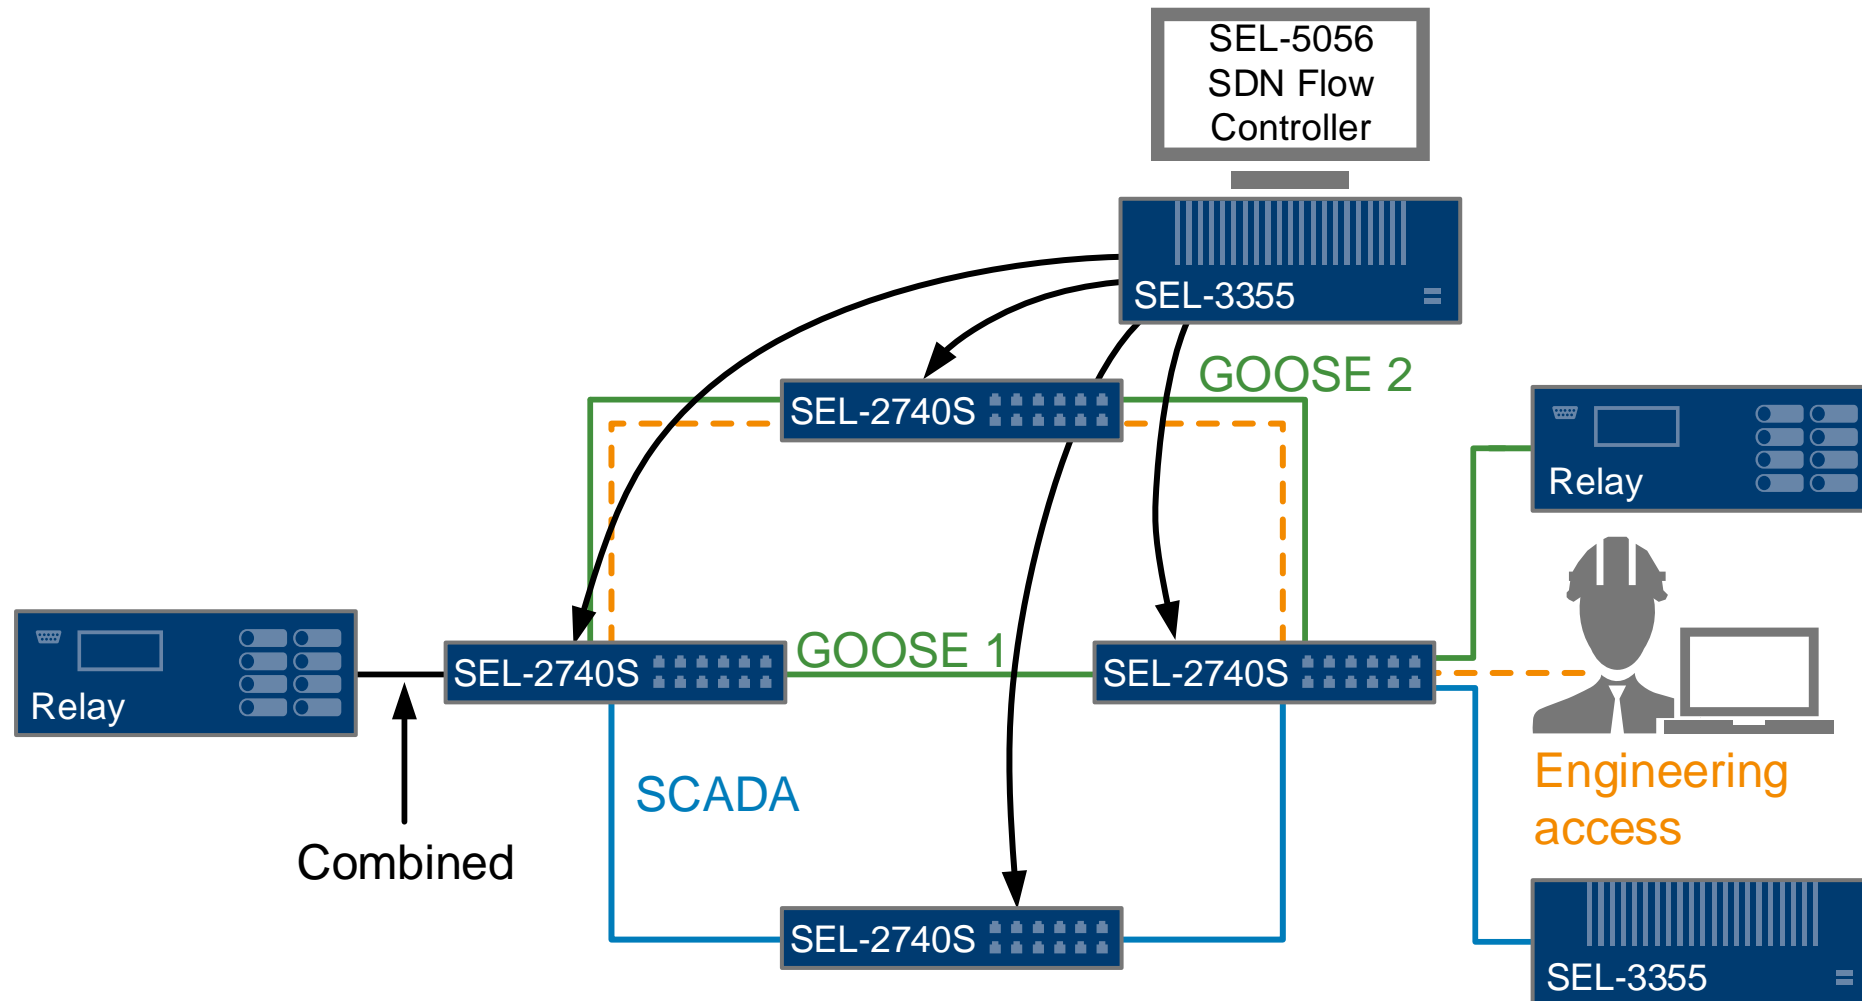

Network visibility

Physical
connections

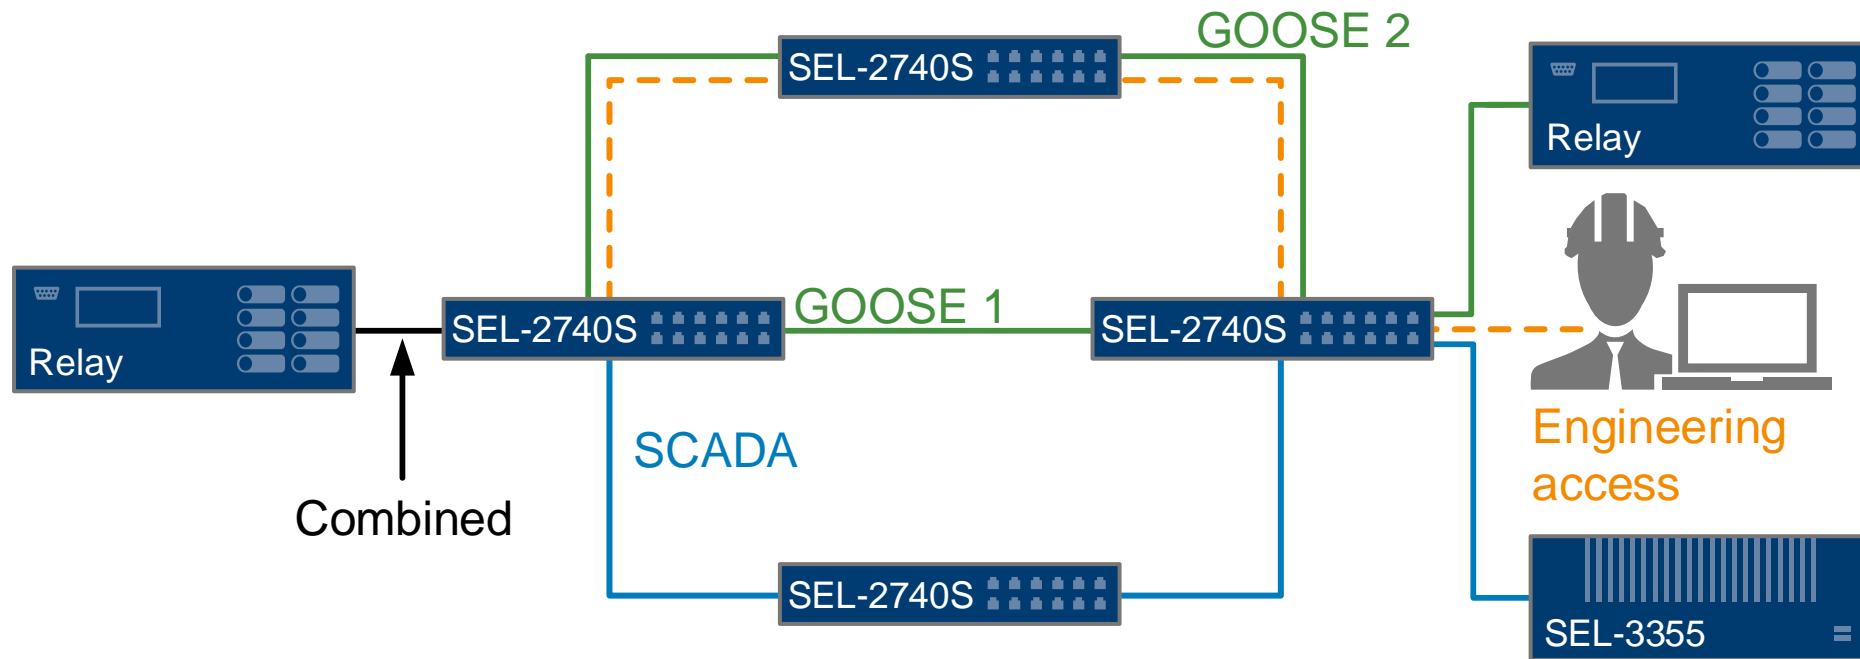

Logical
connections

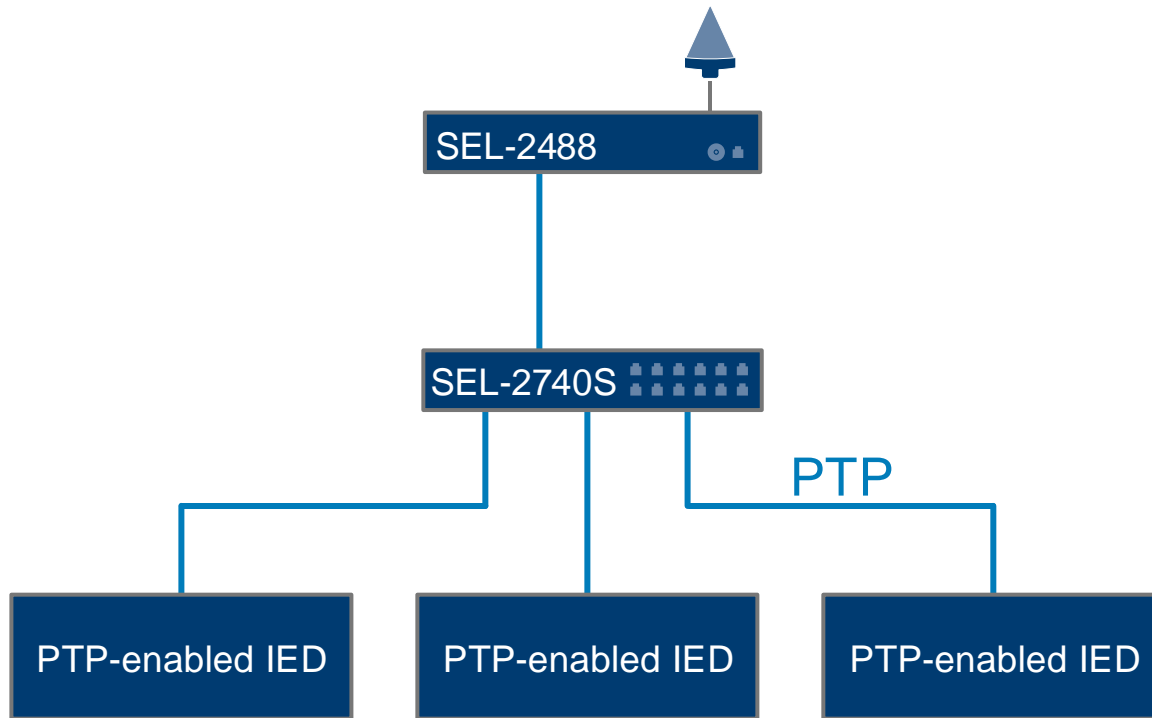

Control packet forwarding by application

Flow controller is not required for network operation

PTP time synchronization through SEL-2740S SDN switch

SEL-2740S supports IEEE 1588 PTP transparent clock with IEEE C37.238 power system profile

SEL-2740S adds residence time (time for packet to pass through switch) plus cable delay into PTP packet correction field

SEL OT SDN vs. non-SEL IT SDN

Key attributes	OT SDN with SEL flow controller	IT SDN with non-SEL flow controller
Network operation	Static	Dynamic
Network control	Proactive	Reactive
Flow controller	Power protection applications	Network load balancing
Security	Drop packet	Flood packet
Latency	Fast-fail group timing	Flow setup timing
Network management	Fault reactive	Traffic reactive

SEL-5057 Flow Auditor

Audit and document every host and all conversations on your network in seconds
